

Overview: Introduction to ClassLink ClassSync

Course Description:

ClassLink ClassSync transforms the frustrating and time-consuming job of user management in Microsoft Active Directory into an automated and effortless process. This software tool synchronizes your Active Directory (AD) schema with your Student Information System (SIS) data. ClassSync has a powerful rule based matching system that saves valuable time by automatically matching your Microsoft Active Directory accounts to your SiS. Years of inaccurate accounts and information in your AD can be fixed in under an hour.

Course Goals/Objectives:

- Learn how to have access to ClassSync
- Review the robust features available to administrators
 - Simplify the task of manually matching accounts
 - Auto-populate template fields in Microsoft Active Directory
 - Have the option to automatically update each account
 - Run reports on all users that were updated, deactivated and imported
 - And much more...
- Hands on experience to explore each feature

Materials:

To participate in this course, you will need the following:

- ClassSync-installed computer
- ClassSync username and password
